

Thanks for choosing The  
**Stick-Handler**  
for drip free pouring of your maple syrup!

### A few User tips!

#### *Product details*

*The Stick-Handler* consists of (see Fig. 1);

- the glass container,
- the handle with ring in plastic,
- the inner lid with spout in silicon,
- the outer lid (puck lid) in plastic.

All details are dishwasher safe in the upper compartment of the dishwasher. When a logo is applied, we recommend however handwashing of the puck lid.

### *When disassembling & reassembling your Stick-Handler*

The product is assembled and ready for use when you're receiving it. We recommend however that you disassemble and wash the details before using the product. **N.B.!** The puck lid is assembled on the handle ring by the manufacturer. To keep the stability of the puck lid and to avoid damage of the hinge, we recommend you **not** to disassemble the puck lid from the handle ring but treat them as one unit.

Do like this when **disassembling** the product;

1. Grip the handle as shown in Fig. 2 and unscrew the handle ring from the glass container. **DO NOT** grip the puck lid when disassembling (or reassembling) the handle ring.
2. Loosen the silicon inner lid from the handle ring.

Fig. 2

Do like this when **reassembling** the product;

1. Open the puck lid and use both hands to press the silicon inner lid from underneath, as shown in Fig. 3. Place the silicon inner lid chamfer against the heel at the inside of the handle ring, to make sure the spout is directed forward.
2. Turn the handle ring upside down and press the silicon inner lid all the way up against the underside of the handle ring (above the three bayonet stops) as shown in Fig. 4.
3. Grip the handle the same way as when you disassembled the handle ring (see Fig. 2). Turn the handle ring first counterclockwise, until you feel that it drops all the way down on the container neck. Then turn the handle ring clockwise, until you can feel that it is securely fastened. Please note that it takes less than one eighth of a turn until the handle ring is securely assembled on the glass container.

### *When using your Stick-Handler*

As in real hockey, you have different ways to grab the stick and move the puck when using *The Stick-Handler*. Although you will gradually find your own favourite way, we are happy to share three alternative techniques to start with.

#### **Technique no. 1 (Fig 5 & 6)**

This technique - with a steady grip of the handle as shown in Fig. 5 & 6 - enables you to see the syrup the whole time when pouring and gives you full control to stop pouring at the exact right moment. With the thumb placed on the thumb grip as shown on the pictures, you are able - without training - to smoothly move the puck up and down. If you want to, you can always train on closing the puck lid silently, but that's premium of course!

#### **Technique no. 2 (Fig 7)**

If you want to stabilize your Stick-Handler sideways, you can do that by placing your index finger on the blade as shown in Fig 7. Your thumb will then be placed slightly more angled towards the puck, but otherwise this technique is very similar to the first one. And you are as able as with the previous technique, to see the syrup throughout the entire pouring.

#### **Technique no. 3 (Fig 8)**

This technique is a bit more sophisticated than the previous two. Here you use instead your little finger to stabilize the Stick-Handler as shown in Fig 8. It requires a bit more strength in your fingers and furthermore you may have to lean your head a bit or slightly angle your hand, to keep your eyes on the maple syrup when pouring. We therefore believe this technique requires a bit of training and would recommend you to save it until you feel comfortable with technique no. 1 & 2.

#### **Final tips**

No quick hand movements are needed to prevent spillage when you stop pouring. Just stop calmly and the spout takes care of the drip.

*We wish you a lot of joy with your new Stick-Handler!*

*The Stick-Handler* is delivered by Sweden-Canada Products AB, a family owned Swedish entity with family ties to Canada. You find more information about the product and the company at [www.stick-handler.com](http://www.stick-handler.com)
